

The Japanese present conditions and future about the nuclear issue.

0. Japanese most welcomed the contents of the speech that President Obama performed in Prague Castle in 2009. However, the reputation for the President fell down because the behavior about the later nuclear issue of the President did not become clear. The American ambassador to Japan attended Hiroshima peace memory ceremony on this August for the first time in history, however he did not offer flowers. In addition, the ambassador did not enter Nagasaki that is another being bombed place.
1. Some coworkers in my hospital say that Japan should expand armaments and possess A-bomb. People said until 1990 "if USSR attacks to Japan what should we do?" And now people say "if North Korea attacks to Japan what should we do?" I argue that I can have an influence on world peace in maintaining peace for mind (diplomacy and non-military affairs) of constitution Article 9. After all the menace of North Korea hasn't defeated yet.
2. Even if the Japanese Government becomes the government of the Democratic Party from the Liberal Democratic Party, they support "a nuclear deterrence theory." It is said that an American "nuclear umbrella" can feel relieved. It is a contradiction. Why do they care about the USA? I do not understand it well.
3. I insist the people all over the world to visit the place A-bomb was actually dropped. I want them to watch the exhibits of A-bomb memorial and talk to the local people. People in the world, doctors in the world, come to Japan. Please visit Hiroshima and Nagasaki.
